Index	4
--------------	----------

nflverse_archive	<i>Archive nflverse</i>
------------------	-------------------------

Description

Archive nflverse

Usage

```
nflverse_archive(release_name)
```

Arguments

release_name	Name of the release
--------------	---------------------

nflverse_save	<i>Save files to nflverse release</i>
---------------	---------------------------------------

Description

This functions attaches nflverse attributes like type and timestamp, saves data to a temporary directory in all four of csv, rds, parquet, and qs formats, and then uploads to nflverse-data repository for a specified release tag.

Usage

```
nflverse_save(
  data_frame,
  file_name,
  nflverse_type,
  release_tag,
  .token = gh::gh_token(),
  file_types = c("rds", "csv", "parquet", "qs"),
  repo = "nflverse/nflverse-data"
)
```

Arguments

data_frame	data_frame to save
file_name	file_name to upload as, without the file extension
nflverse_type	metadata: name/information to add to data
release_tag	name of release to upload to
.token	a GitHub token, defaults to gh::gh_token()
file_types	one or more of c("rds","csv","parquet","qs","csv.gz")
repo	repository to upload to, default: "nflverse/nflverse-data"

nflverse_upload	<i>Upload to nflverse release</i>
-----------------	-----------------------------------

Description

Upload to nflverse release

Usage

```
nflverse_upload(...)
```

Arguments

...	other args passed to piggyback::pb_upload()
files	vector of filepaths to upload
tag	release name
repo	repository to upload to, default: "nflverse/nflverse-data"
